multidotscan 2.1 J is an intuitive new book scanning software to the UK market that allows digital cameras from Canon and Nikon to be used like a book scanner. Saving hours of post processing time compared to conventional capture processes.

Like a book scanner, workflows are created and then jobs within the workflow are created. These jobs contain all of the associated settings and can be opened and closed as required.

Images are captured within the software and features such as automatic crop, page split and deskew can be applied prior to saving. When capturing negatives on a lightbox a positive output can be selected to reduce post processing.

Images can be outputted as JPG, TIFF, PDF or PDF/A. Dual output can be applied if required.
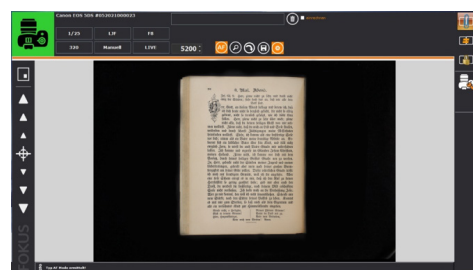

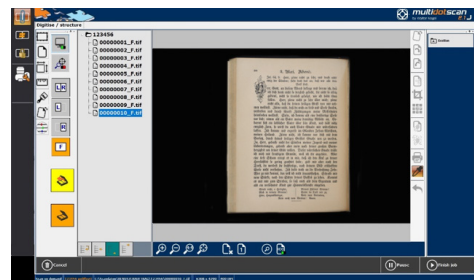

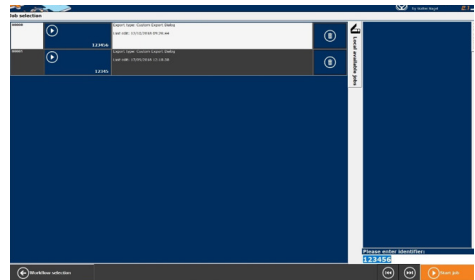

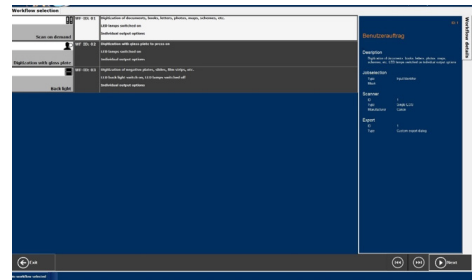

The Software works with ATIZ systems and many users are already enjoying the functionality of this software coupled with their ATIZ hardware.

*Currently automatic crop and deskew not supported. Only Canon cameras can be supported on ATIZ units

Features include:
- Workflow and job creation
- Auto Deskew prior to save
- Auto page split prior to page
- Auto crop prior to save
- Pagination, Recto Verso
- Negative/Positive Output
- JPG, TIFF, PDF, PDF/A dual outputs
- Two screen operating system, live view and workflow
- Full camera control
- White balance - Conducted through the camera
- ICC colour calibration - *multidotscan 2.1 J* uses ICC profiles, but cannot create them
- Compatible with Canon, Nikon and ATIZ systems
- Compatible with other 1 and 2 camera copyboard systems

Genus are the sole UK distributors
